

# Anthem House leads to improvement of outcomes at one year after Telos

Using standardized tests the Youth Outcome Questionnaire (YOQ-01) and the Family Assessment Device III (FAD), we compared the amount of change reported from the day of discharge from Telos or transfer to the Anthem House to the same score one year later. For YOQ-01 parent responses indicate that 98% of the time students did better at Anthem house. For the FAD parents responses indicate an improvement 87% of the time. Both graphs show a decrease in average reported symptoms over one year post discharge if Anthem was attended.

**98% of the time attending Anthem House improved their individual scores.**

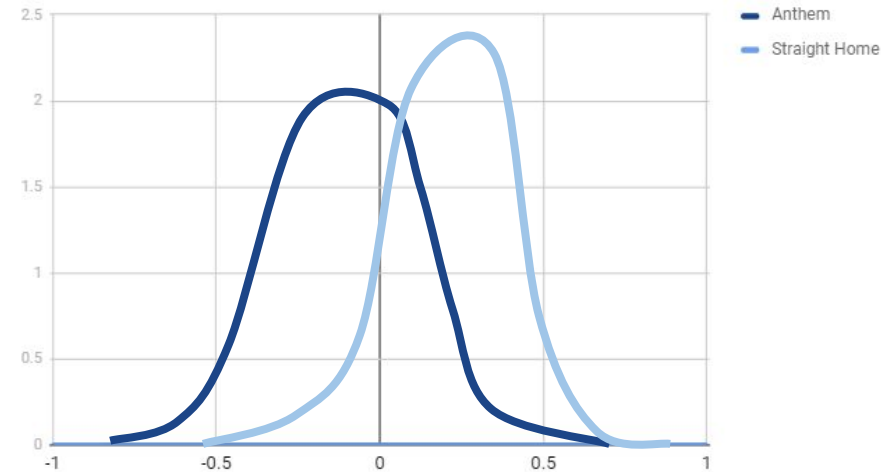

**87% of the time attending Anthem House improved their family scores**
