

Evidence-Based Success

For the past 11 years (2004-present) we have been gathering data on how well our students respond to treatment. Using the Youth Outcome Questionnaire 2.01, we measure students at admit, discharge, and 1-year post discharge. 788 parent and 815 student assessments are represented in this study. The University of New Hampshire oversees our research.

The graphs below demonstrate our effectiveness. The Y-OQ generates a score measuring global mental, behavioral, and emotional health. The lower the score, the healthier a boy is. Scores below a 46 are considered normal, healthy teens.

A score below 46 suggests a student is in the normal, healthy range.

Parent Report

Student Report

Data suggests Telos students come to treatment in high distress, achieve healing, and maintain their progress long term.

For being a treatment program, Telos is a good place to be

I am progressing in my treatment

The other students seem to be progressing in their treatment

Employees care about me as a person

In college

HS graduates with a job

One year after Telos, parents report...

I have a friend at Telos

"Telos helped my son"

Choosing Telos was the right thing

Telos was worth the investment

Pie chart graphics display the degree of parent's agreement or disagreement with specific statements. All data in this study consists of cross-sectional descriptive statistics.
